

Dust Control, Inc.

PECS System

Performance Guarantee

Dust Control, Inc. (DCI) guarantees the performance of the PECS containment system. If the recommended equipment is installed to the correct specifications and maintained properly, DCI guarantees that the dusting and spillage will be visibly reduced and possibly eliminated at each transfer point.

If the PECS system, after installed to DCI recommendations, fails to reduce dusting spillage caused by the transfer point, the customer will not be invoiced for any of the PECS components installed at that transfer point..

The PECS system guarantee requires a DCI Field Technician onsite to oversee the installation of its equipment.

DCI offers a one year guarantee against defects in material and workmanship and one year wear life with standard AR plate liners used in the DCI PECS System.

The DCI PECS system will solve your transfer point problems. Because DCI can not control the total atmosphere inside a transfer building, you must understand that airborne dusting may be coming from other sources than the transfer point. Air flow in conveyor gallery's or conveying equipment on other floors of the same building may be contributing to your problems.

The DCI system is not a quick fix. Your PECS system investment will provide you with long term results with minimal maintenance to the installed equipment.

Once installed, the plant is responsible for periodic maintenance checks to make sure the system is maintained properly. These periodic inspections require checking general conveyor maintenance items such as proper belt alignment, skirtboard rubber, idlers, and chute wear liners. Proper maintenance will ensure long term results against dusting and spillage at each transfer point.
