

SYSTEM SURVEY ANALYSIS

If you are currently experiencing a considerable amount of spillage and fugitive dust problems in your material handling system, perhaps it's time to take advantage of our System Survey Analysis. DCI will conduct an on-site survey to assess your conveyor system's needs and then will evaluate the most cost effective means of correcting those needs. We will provide you with an easy to understand written assessment that will include all the information necessary to help you evaluate your system.

The DCI System Survey Analysis will give you a detailed assessment by area. We will breakdown each conveyor from loading to unloading and explain all problems that exist. The survey will include our recommendations on how to make your present equipment operate more effectively and efficiently and how to extend the life of your equipment. The survey will also include a cost breakdown, by area, of the equipment needed and DCI labor to install the equipment to get your system running at peak performance. Dust Control can also submit to you, upon request, a cost proposal to provide a DCI Field Technician to supervise a contractor or your employees with the installation of DCI equipment. Whether DCI provides you with a turnkey service or a field technician, your system needs will be met.

If you are tired of spending money on constant maintenance to clean up spillage and dust, let us help you take care of this problem. At Dust Control, Inc. we offer quality services and we guarantee it.
